Russian collocability through corpus-based tool RuSkELL

Wann? 08.01.2018, 16.15-17.45 Uhr

Wo? Dorotheenstr. 65, Raum 5.57

Abstract

RuSkELL is the abbreviation for Russian Sketch Engine for Language Learning, a corpus-based online tool that presents word sketches with examples and similar words in Russian. The goal of the talk is to present the process of development of the tool and to analyze the issues which the researcher faced while preparing RuSkELL for language learners. The talk also discusses examples of lexical items in connection with both Russian in foreign language acquisition and in lexicographic descriptions.
